Dear Mark,

BIOAUGMENTATION MAINTENANCE- DRAINS AND GREASE TRAPS

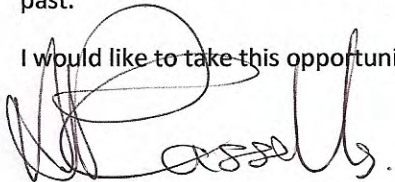

Over the last six months we have been using your services and products Pitking, Fatking and FSR301 dosed through our drains as an ongoing maintenance.

I am very pleased to report that this program has been a huge success. The product has completely broken down the solid fat build-up we had been experiencing in our Grease traps, Pipes and Pumps.

We have recently inspected our main lines with cameras due to a blockage, which was found to be of a non-organic nature. I am delighted to report that the pipes are clean. Furthermore the effluent in our grease traps is completely liquid and we no longer have to extract our sump pumps for their weekly clean-up either.

To summarise: We are saving on call out costs due to blockages, on ineffective chemicals, the life on our pumps will be extended, our pipes will no longer require the regular and expensive high pressure cleaning we have previously commissioned, man hours can be utilised more effectively and finally our tenants are no longer experiencing the regular blockages and disruptions as they have in the past.

I would like to take this opportunity to express our appreciation for the service we are receiving.
