

Montagu Primary Maturation Pond – Case Study

The primary maturation pond was totally congested with anaerobic sludge reducing the removal and treatment efficiency. The consultant got quotes in excess of R500 000 to mechanically remove the sludge. Avantu biodegraded the sludge over 8 weeks for less than R50 000.

A. The day of dosing

B. One week after dosing

C. Three weeks after dosing

D. Five weeks after dosing

E, Eight weeks after dosing
